

## Symphony partners with Sybase's Mobile application development unit

### Business Challenge

Sybase, an SAP company, creates technology that enables the Unwired Enterprise for customers and partners by delivering enterprise and mobile infrastructure, development, and integration software solutions. The world's most critical data in commerce, finance, government, healthcare, and defense runs on Sybase.

With Sybase's core strategy focused on mobile offerings, they were looking to move to the next generation product that can be used by SAP to enable their applications. Also, the need to repurpose their existing high-cost staff to develop next-generation products led to the partnership with Symphony.

### Solution

With the Symphony PLM teams' proven ability to manage software product development end-to-end, Symphony provides software sustenance engineering services including joint development of the roadmap, development, maintenance, and support of new and existing features, testing and quality assurance, and technical publication.

Within 4 months of entering the partnership, Symphony played a major role in developing and certifying the Mobile Office application on Apple's latest iPhone operating system (iOS 4.0). Significant effort has gone into developing new functionalities to support sales efforts.

### Results

Keeping pace with a rapidly maturing mobile market our dedicated team developed and certified customer-driven features on Apple's latest iPhone operating system that supported sales efforts for several new major accounts.

### About Symphony Mobile Office

*A complete enterprise solution that provides secure, integrated wireless corporate email and business workflow functions to mobile information workers on a variety of mobile devices.*
